MAC 2026

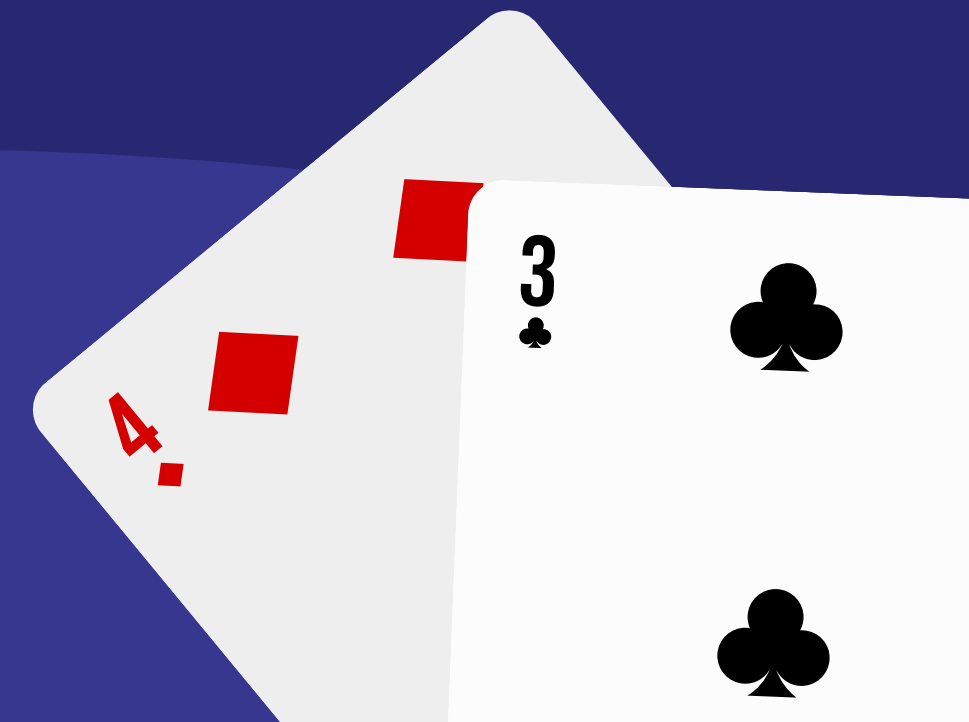

ABOUT MAC

Largest student-run computing club at Monash University, with over **1,500 current members** and an online presence that extends across the globe.

We strive to upskill students **through high-quality events, workshops and hackathons**, spanning both technical and professional domains.

Through our impact, **we aim to make coding enjoyable** and accessible to all, offering students real-world experience .

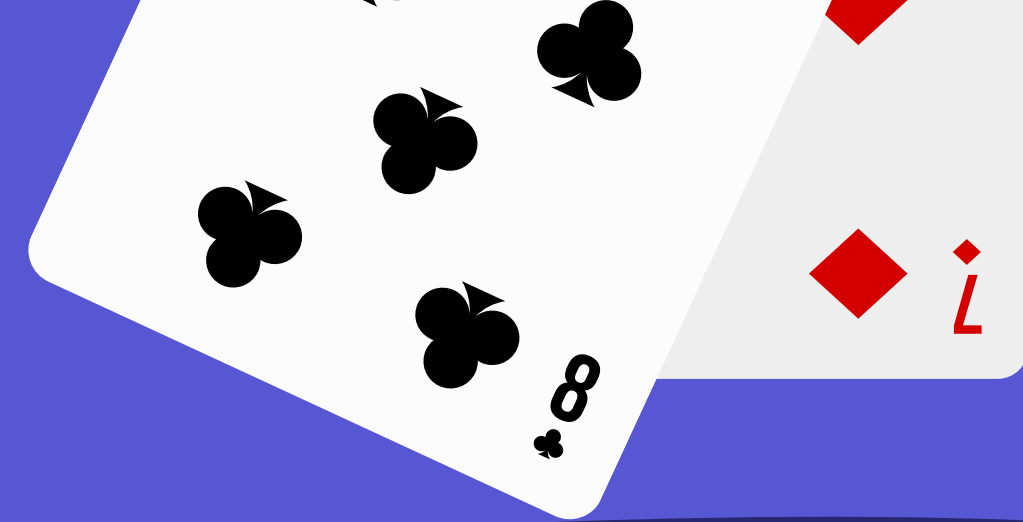

WHAT IS A POKER BOT HACKATHON?

- The Poker Bot Hackathon is an event where over 48 hours participants, individually or in teams, create a bot capable of playing poker and using strategies to compete against other participants' bots.
- At the closing ceremony, winners will be determined in a 4 round Swiss style tournament

PRIZES

 Jane Street
merch!!

WHAT TO SUBMIT

> Starter Template

<https://poker.monashcoding.com/dl/macpoker-scaffold.zip>

README + main.py you can edit, test, zip then upload

> SDK (pip install)

[pip install https://poker.monashcoding.com/dl/macpoker-0.1.0-py3-none-any.whl](https://poker.monashcoding.com/dl/macpoker-0.1.0-py3-none-any.whl)

Gives you the macpoker CLI for local testing

> Submission page

<https://poker.monashcoding.com/app>

Upload your zip here

> Docs

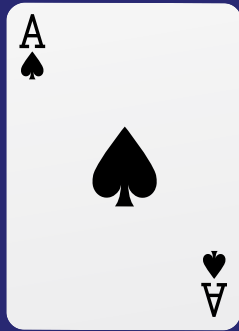

<https://docs.poker.monashcoding.com/>

Bot API, testing and rules

Your zip

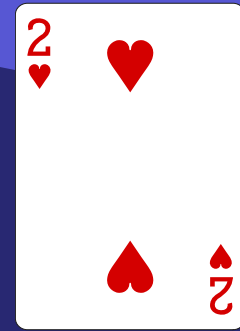

- main.py at the root
- Exactly one Bot subclass with `act(state)` decision method
- Other modules are fine, imported from main.py
- Max 20 MB unpacked, 300 files
- Only Python 3.12, macpoker, numpy and the standard library. No network/external api calls or other packages

HOW TO SUBMIT

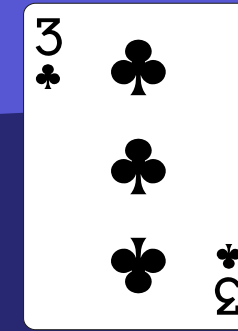

Download

Grab the scaffold zip from the website

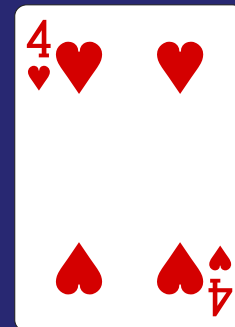

Write

Edit main.py and write the logic behind your bot

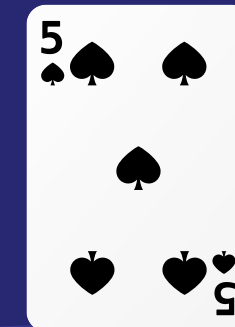

Test

Play your bot against our house bot

Zip

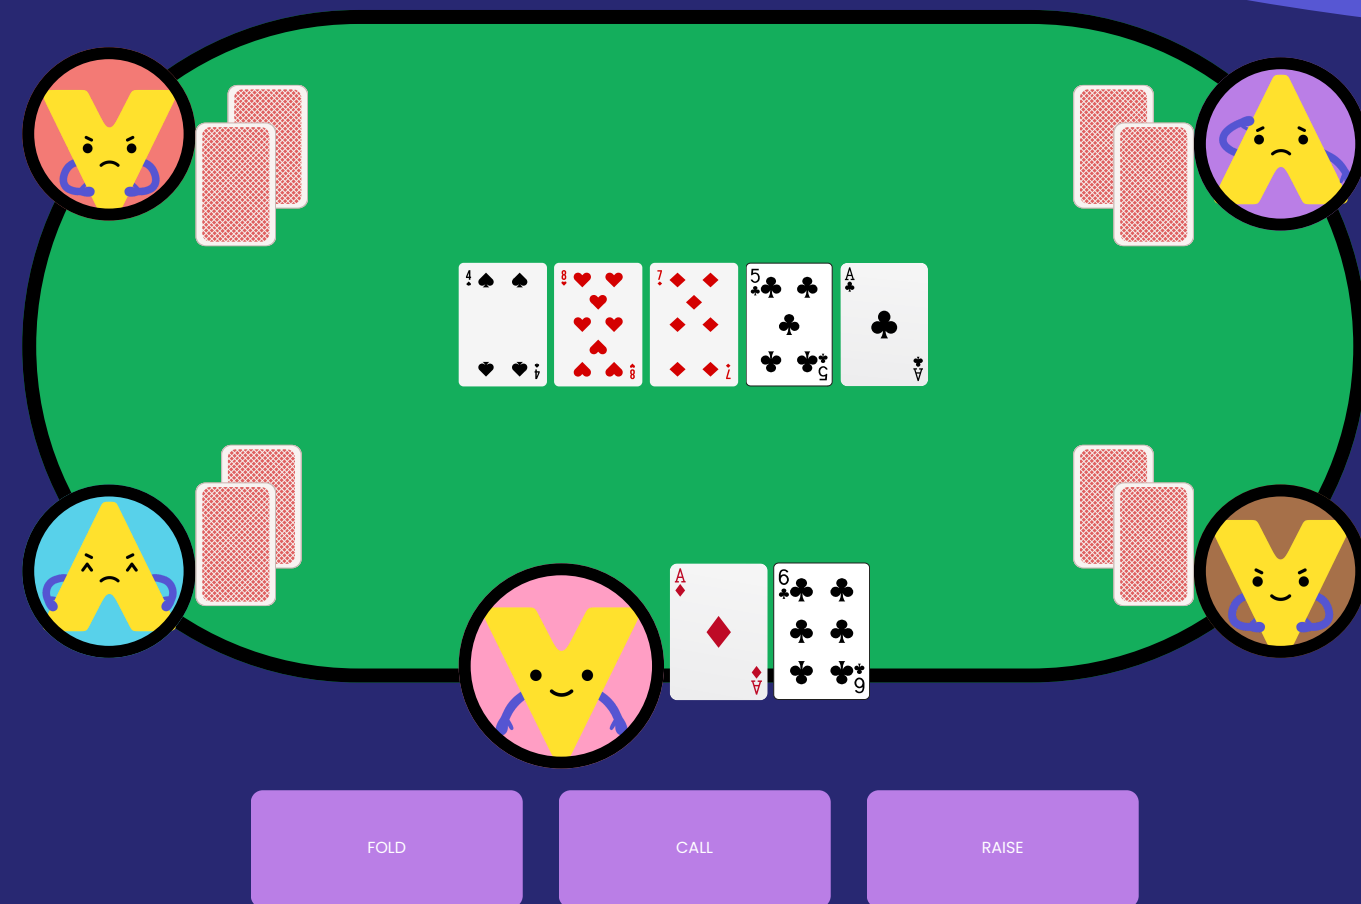

Zip the folder so main.py sits at the root

Upload

Upload your zip to the website before the deadline

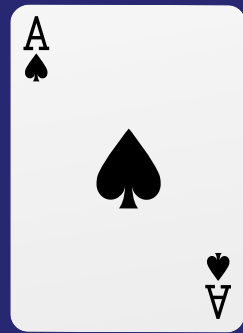

TOURNAMENT FORMAT

Duplicate Deals: Each deal is replayed once per seat, rotating the bots around the table. So everyone plays the same cards and positions.

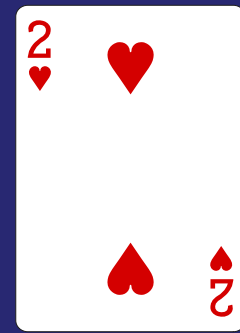

- **Teams:** 1-4 people, one bot each
- **Games:** No-limit hold'em, tables of about 5 bots. Stacks reset to 200 every hand. Score is total chips won over the game.
- **Clocks:** Each bot has a chess clock where a time bank plus an increment per hand. Timeouts, crashes and protocol violations check-fold the rest of the game.
- **Winning:** Placement points summed over the 4 rounds decide the standings. The top 3 win prizes, and ties are settled head-to-head.

TOURNAMENT FORMAT - SCORING & GROUPING

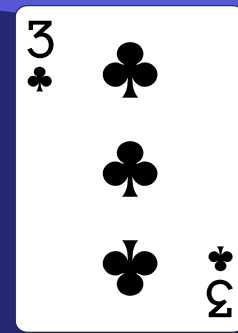

Play

5 games per round.
Each game bots are ranked by chips with 5pt (1st) down to 1 pt (last)

Round
Total

Sum of game points ranks you in your group
→ 5 to 1 placement pts (ties share points)

Reshuffle

Between rounds, groups reform by cumulative points, so you face bots at your level

Final Standings

Sum of placement points across all 4 rounds. Top 3 win

Points per game and per round
